Duration	9 mins 35 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

a. Merge search
b. Linear search ✓
c. Quick search
d. Bubble search

Question **2**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search continues until the end of the list
b. The search backtracks to find duplicate elements
c. The search stops immediately ✓
d. The search starts over from the beginning

Question **3**

Correct

Mark 1.00 out of 1.00

During a binary search, what happens if the target element matches the middle element?

a. The search ends successfully ✓
b. The search continues in the right sublist
c. The list is sorted
d. The search continues in the left sublist

Question **4**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

a. The search continues from the beginning
b. The search continues in the left or right sublist ✓
c. The search stops
d. The list is sorted

Question **5**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It is slower than linear search for small lists
b. It can only be applied to large lists
c. It does not work with negative numbers
d. It requires the list to be sorted ✓

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

a. When the list is very small
b. When the list contains duplicate elements
c. When the list is sorted ✓
d. When the list is unsorted

Question **7**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

a. n ✓
b. n-1
c. n/2
d. log n

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

a. Linear search is more efficient than binary search on large lists.
b. Linear search requires the list to be sorted.
c. Linear search can be applied to both sorted and unsorted lists. ✓
d. Linear search divides the list into halves.

Question **9**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Deleting elements from a list
b. Determining whether an element is present in a list ✓
c. Inserting elements into a list
d. Sorting elements in a list

Question **10**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

a. Hash search
b. Binary search
c. Linear search ✓
d. Interpolation search

Question **11**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

a. Bubble ✓
b. Selection
c. Insertion
d. Complexity

Question **12**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

- a. Searching ✓
- b. Finding
- c. Discovering
- d. Mining

Question **13**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

- a. Jump search
- b. Hashing
- c. Linear search ✓
- d. Binary search

Question **14**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

- a. By comparing each element in the list sequentially ✓
- b. By sorting the list first
- c. By dividing the list into halves
- d. By using a hash function

Question **15**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

- a. When the item is not the array at all
- b. When the item is the last element in the array
- c. Item is the last element in the array or item is not there at all
- d. When the item is somewhere in the middle of the array ✓
